DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5 recites an improper Markush group. See M.P.E.P 2173.05(h).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 13, 15 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Prosenz (U.S. Patent 4,376,594).

As discussed in previous Office actions, Prosenz discloses a plurality of elements having the claimed shape (Figure 5). There is a coupling structure (8). This coupling structure is of a different material than the elements and would inherently absorb some energy when impacted.

Art Unit: 3671

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Prosenz, as applied above.

The materials are not disclosed by Prosenz in association with the energy absorbing material (8); however, these materials are well known for use in crash barriers. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have used polytetrafluoroethylene as a coating on the coupling structure of Prosenz, in order to ease connection and disassembly of adjacent barriers, for example. This meets claim recitations.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Prosenz as applied above, and further in view of Smith (U.S. Patent 5,022,781).

Prosenz teaches the rod, but is silent regarding a bore. Smith teaches a barrier having a cup lined bore (34, Figure 3) for accommodating a rod. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the cup lined bore of Smith with the barrier of Prosenz in order to strengthen the bore and/or easily manufactured the barrier having a bore therein.

Art Unit: 3671

Claims 7 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prosenz/Smith as applied above, and further in view of Tagg (U.S. Patent 6,837,647).

The rod of Prosenz appears to be solid. Tagg discloses optionally interconnecting barriers with a tubular pin (Figure 7a). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have used the pin of Tagg with the barrier of Prosenz in order to obtain a more secure connection, as taught by Tagg.

The pin of Tagg has integral anchor members (43).

Allowable Subject Matter

Claims 8 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 17 is allowed.

Response to Arguments

Applicant's arguments filed 7 August 2007 have been considered but are most in view of the new grounds of rejection. It is noted that applicant has removed the recitations which previously overcame the 102(b) rejection in view of Prosenz; therefore, the rejection is once again proper.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary Hartmann whose telephone number is 571-272-6989. The examiner can normally be reached on Tuesday through Friday, 9am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Will can be reached on 571-272-6998. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA)/or 571-272-1000.
